		Total Cost per Km of Line ³	\$37,960	\$10,907	\$10,979	\$10,789	\$12,005				
Public Policy Responsiveness Distributors deliver on obligations mandated by government (e.g., in legislation and in regulatory requirements imposed further to Ministerial directives to the Board).	Connection of Renewable Generation	Renewable Generation Connection Impact Assessments Completed On Time ⁴			100.00%						
		New Micro-embedded Generation Facilities Connected On Time	100.00%	100.00%			100.00%		90.00%		
Financial Performance Financial viability is maintained; and savings from operational effectiveness are sustainable.	Financial Ratios	Liquidity: Current Ratio (Current Assets/Current Liabilities)	0.67	0.57	0.72	0.76	0.85				
		Leverage: Total Debt (includes short-term and long-term debt) to Equity Ratio	1.10	1.31	1.32	1.25	1.27				
		Profitability: Regulatory Return on Equity	Deemed (included in rates)	9.00%	9.00%	9.00%	9.00%	9.00%			
			Achieved	8.11%	7.30%	6.14%	6.79%	6.09%			

1. Compliance with Ontario Regulation 22/04 assessed: Compliant (C); Needs Improvement (NI); or Non-Compliant (NC).

2. An upward arrow indicates decreasing reliability while downward indicates improving reliability.

3. A benchmarking analysis determines the total cost figures from the distributor's reported information.

4. Value displayed for 2021 reflects data from the first quarter, as the filing requirement was subsequently removed from the Reporting and Record-keeping Requirements (RRR).

2022 Scorecard Management Discussion and Analysis (“2022 Scorecard MD&A”)

The link below provides a document titled “Scorecard - Performance Measure Descriptions” that has the technical definition, plain language description and how the measure may be compared for each of the Scorecard’s measures in the 2022 Scorecard MD&A:

<http://www.ontarioenergyboard.ca/OEB/ Documents/scorecard/Scorecard Performance Measure Descriptions.pdf>

Scorecard MD&A - General Overview

Essex Powerlines Corporation (“EPLC”) is dedicated to meeting and exceeding customer and community needs. It does so by providing services that put the needs of its customers first and are cost effective.

In 2022, EPLC continued to exceed performance targets set for the industry. EPLC saw improvement in many areas as compared to 2021, including an increase in new service connections, telephone calls answered on time and scheduled appointments met on time.

EPLC proactively monitors scorecard metrics using dashboards, in order to actively monitor and ensure compliance, while continuously investigating further opportunities to improve upon its performance. EPLC is committed to on-going year-over-year performance improvement for 2022 and beyond.

Service Quality

- **New Residential/Small Business Services Connected on Time**

In 2022, EPLC connected 91.45% of low voltage residential and small business customers within the five-day timeline prescribed by the Ontario Energy Board (OEB). This is an improvement from 2021 performance of 90.84%. EPLC has consistently outperformed the industry target of 90% for the past five years, since 2018.

- **Scheduled Appointments Met On Time**

EPLC scheduled 152 customer related appointments in 2022 and attended 98.68% of these appointments on time. This is an improvement from 93.15% of appointments met on time in 2021. For the five-year period 2018 to 2022, EPLC has consistently outperformed the industry target of 90%.

- **Telephone Calls Answered On Time**

EPLC's customer service call centre received 20,537 calls and 80.94% of the time a Customer Service Representative answered the phone within 30 seconds or less. This is an improvement from 76.62% of telephone calls answered on time in 2021. EPLC has consistently outperformed the industry target of 65% for the five-year period from 2018 to 2022.

Customer Satisfaction

- **First Contact Resolution**

Electricity distributors have been granted discretion related to how this metric is implemented and monitored. Formalization of this metric by the OEB is anticipated in the near future. The spirit of this metric, however, is to identify a distributor's effectiveness at satisfactorily addressing customers' complaints upon first contact with a distributor.

EPLC measures this metric based on the number of calls received and how many of these calls required escalations to a supervisor. In 2022, 99.60% of calls received by EPLC were resolved without escalation to a supervisor. This is an improvement over 2021 where 99.08% of calls did not require escalation.

- **Billing Accuracy**

For 2022, EPLC issued 377,745 bills and achieved a billing accuracy of 99.95%. This is consistent with the 2021 result of 99.95%. EPLC has consistently outperformed the industry target of 98% for the five-year period from 2018 to 2022 and will continue to monitor its billing accuracy to ensure compliance with the standard established by the OEB.

- **Customer Satisfaction Survey Results**

Electricity distributors have been granted discretion related to their implementation of this metric. Customer satisfaction surveys are required to be completed on a bi-annual basis and are meant to examine customer satisfaction levels in the following key areas: (a) power quality and reliability; (b) price; (c) billing and payment; (d) communications and; (e) the customer service experience. Distributors are expected to follow good survey practices and select samples that adequately represent the distributors' rate payer population.

In 2022, EPLC engaged an independent third-party service provider to conduct a telephone survey on its behalf. This survey is required to be completed on a bi-annual basis. A total of 413 random telephone surveys were completed, with 378 residential customers and 35 general service (under 50kW) customers surveyed. Customers were polled on their levels of satisfaction with EPLC in the following areas: (a) overall satisfaction; (b) reliability and power quality; (c) billing and payment; (d) customer service experience; (e) communications; and (f) price.

The customer service survey results indicate that overall 86% of customers are satisfied with EPLC. EPLC uses feedback received from the survey results as a method of better understanding customer preferences and priorities in order to improve ongoing customer satisfaction.

Safety

- **Public Safety**

- **Component A – Public Awareness of Electrical Safety**

This survey is required to be completed on a bi-annual basis; therefore, a survey was not completed in 2022. In 2021, EPLC engaged a third party to conduct this survey on its behalf. Random telephone surveys were conducted on 400 residents, 18 years of age or older, residing within EPLC's service territory. The survey's focus was to measure the public's level of awareness regarding key electrical safety precautions. The results indicated that 85% of the public are aware of Electrical Safety, which is a slight improvement over the results of the last survey completed in 2019.

- **Component B – Compliance with Ontario Regulation 22/04**

O. Reg. 22/04 requires the "approval of equipment, plans, specifications and inspection of construction before putting systems into service"¹. EPLC compliance with this regulation is audited annually by an independent consultant selected by the ESA. These audits will yield one of the following outcomes:

- Not Compliant – indicates a failure to comply with a substantial part of O.Reg. 22/04 or continuing failure to comply with a previously identified NI item;
- Needs Improvement – indicates continuing failure to comply with a previously identified NI item or a non-pervasive failure to comply with adequate, established procedures for complying with O.Reg. 22/04;
- Compliance – indicates that the distributor substantially meets the requirements of O.Reg. 22/04

¹ "EDSR | Ontario Regulation 22/04." *ESA website*, <https://esasafe.com/role/edsr/>

In 2022, EPLC received an audit result of Compliant, which is consistent with the audit result in 2021. EPLC continues to ensure it is compliant with O.Reg. 22/04. Safety is a core value of EPLC and its importance is highlighted throughout EPLC's daily operations.

- **Component C – Serious Electrical Incident Index**

There have been no serious electrical contacts within EPLC's distribution system during the five-year period from 2018 to 2022 as indicated on the scorecard.

System Reliability

- **Average Number of Hours that Power to a Customer is Interrupted**

EPLC experienced a decrease in the number of hours where power to a customer was interrupted, which was 1.82 in 2022 compared to 2.02 in 2021. EPLC's current five-year average is 1.63 hours which is higher than last year's five-year average and above the target of 1.24. Loss of supply (outside of EPLC's service territories) has historically been, and continues to be, the largest contributor to this metric. In 2022, 61.2% (an increase from 57.2% in 2021) of the total number of hours power was interrupted was the result of a loss of supply event. All other sources of customer interruptions are noted in Figure 1 below.

Scheduled outages, foreign interference and adverse weather are some of the various incidents that can affect this metric. EPLC's Distribution System Plan ("DSP"), Reliability Centered Maintenance ("RCM") and Asset Management Programs are designed to reduce these occurrences. In addition, EPLC uses Best-In-Class Asset Investment Strategy tools and processes to improve this metric. Examples of these tools and processes include:

- Using risk assessments and strategic objectives to reduce risk and optimize investment;
- Maintain RCM statistics within acceptable severity and importance indices;
- Perform inspections, preventative maintenance and remediate findings;
- "Global Information System" (GIS) provides full customer connectivity and asset information;
- SmartMAP software provides:
 - Full integration of alerts of out of range distribution system data (i.e. voltage, loading, fault current and outages),
 - Engineering – modelling, design and analysis tools

Figure 1

- **Average Number of Times that Power to a Customer is Interrupted**

EPLC experienced a slight decrease in the number of times that power to a customer was interrupted, which was 0.84 in 2022 compared to 0.89 in 2021. EPLC’s five-year average is 0.96, which has increased slightly compared to the previous five-year average and is above the target of 0.74. Scheduled outages, foreign interference (animal, vehicle, dig-ins) and defective equipment account for approximately 48.9%, 18.6% and 9.7% of the 2022 metric respectively. All other sources of power interruption are noted in Figure 2 below.

Consistent with above, several incidents can affect this metric. EPLC’s “DSP”, “RCM”, Asset Management Programs and Best-In-Class Asset Investment Strategy tools and processes help to reduce these occurrences.

Figure 2

Asset Management

- Distribution System Plan Implementation Progress**

EPLC filed its first DSP as part of its Cost of Service Application submitted in August 2017 which was approved effective May 1, 2018 and implemented October 1, 2018. The DSP outlines the forecasted capital expenditures over the next five years required to maintain, improve and expand EPLC's distribution system.

EPLC measures the progress of its DSP implementation as a ratio of actual total capital expenditures and system O&M over the total amount of planned capital expenditures and system O&M for the five-year DSP forecast. The 2022 measure indicates that EPLC has completed 97.65% of its planned projected spend in its five-year plan.

Cost Control

- **Efficiency Assessment**

The total costs for Ontario Electricity Distributors are evaluated by the Pacific Economics Group LLC (“PEG”) on behalf of the OEB to produce a single efficiency ranking. Essentially, there are a total of five groups within the rankings, with Group 1 being the most efficient and Group 5 being the least efficient. Since 2012, EPLC has been ranked in Group 2, which is the second most efficient grouping of Ontario Electricity Distributors. In 2022, EPLC achieved Group 1 ranking, the most efficient grouping of Ontario Electricity Distributors. EPLC is committed to maintaining its current efficiency ranking.

- **Total Cost per Customer**

Total cost per customer is calculated as the sum of EPLC’s capital and operating costs and dividing this figure by the total number of customers served. The cost performance result for 2022 is \$625 per customer which is an increase of 10.82% over 2021 and is an overall average increase per year of 3.2% during the period from 2018 to 2022.

EPLC has experienced significant increases in material costs since the global pandemic, with a particular spike in costs in 2022. Additionally, some cost increases experienced are often directly related to industry-driven objectives and new legislated directives that require distributors to invest in assets, personnel and technology to appropriately satisfy these new directives. Over the course of the past several years, examples of these changes would include: customer focused engagement, cybersecurity, the implementation of Smart Meters, increased complexity for market settlement, and the adoption of new accounting standards. EPLC remains committed to implementing all new directives in the most cost-conscious manner possible.

- **Total Cost per Km of Line**

Total cost for this metric is as described above under total cost per customer. This total cost is divided by the kilometers of line that EPLC operates in order to adequately service its customers. EPLC’s 2022 rate is \$12,005 per km of line which is an increase of 11.27% over 2021.

Conservation & Demand Management

- **Net Cumulative Energy Savings**

On March 20, 2019, the Minister of Energy, Northern Development and Mines revoked the direction entitled 2015-2021 Conservation First Framework. EPLC has been working with the Ministry and the IESO to discontinue and wind down all programs. Therefore, this measure is no longer available.

Connection of Renewable Generation

- **Renewable Generation Connection Impact Assessments Completed on Time**

Electricity distributors are required to conduct CIAs within 60 days of the receipt of a complete application. In 2022, EPLC had no requests for CIAs.

- **New Micro-embedded Generation Facilities Connected On Time**

Electricity distributors are required to connect new micro-embedded generation facilities within five business days. In 2022, EPLC connected no new micro-embedded generation facilities. EPLC has consistently performed above the industry target of 90% for the five-year period from 2018 to 2022.

Financial Ratios

- **Liquidity: Current Ratio (Current Assets/Current Liabilities)**

As an indicator of financial health, a current ratio that is greater than 1 is considered good as it indicates that the company can pay its short-term debts and financial obligations. Companies with a ratio of greater than 1 are referred to as being “liquid”. The higher the number, the more liquid and the larger the margin of safety to cover the company’s short-term debts and financial obligations.

EPLC’s current ratio for 2022 is 0.85, up from 0.76 in 2021. This ratio has been trending upwards over the last five years as EPLC has adapted and secured more long-term financing to replace shorter-term borrowings in order to take advantage of historically low financing rates. EPLC's current ratio in 2022 has increased by 11.84% over 2021.

- **Leverage: Total Debt (includes short-term and long-term debt) to Equity Ratio**

The OEB uses a deemed capital structure of 60% debt and 40% equity for electricity distributors when establishing rates. This deemed capital mix is equal to a debt to equity ratio of 1.5 (60/40). A debt to equity ratio of more than 1.5 indicates that a distributor is more highly leveraged than the deemed capital structure. A high debt to equity ratio may indicate that an electricity distributor may have difficulty generating sufficient cash flows to make its debt payments. A debt to equity ratio of less than 1.5 indicates that the distributor is less leveraged than the deemed capital structure. A low debt-to-equity ratio may indicate that an electricity distributor is not taking advantage of the increased profits that financial leverage may bring.

EPLC's Total Debt to Equity ratio has experienced slight fluctuations over the past five years and is 1.27 for 2022. EPLC has intentionally maintained a low Debt to Equity ratio to minimize its annual interest costs and to remain flexible should unforeseen borrowing needs arise. EPLC's goal has been to increase its leverage closer to the approved ratio of 1.5.

- **Profitability: Regulatory Return on Equity – Deemed (included in rates)**

The OEB allows a distributor to earn within +/- 3% of the expected rate of ROE. When a distributor performs outside of this range, the actual performance may trigger a regulatory review of the distributor's revenues and costs structure by the OEB. The allowed deemed return on equity was decreased from 9.85% to 9.00% further to the OEB Final Rate Order EB-2017-0039 effective May 1, 2018 and implemented October 1, 2018.

- **Profitability: Regulatory Return on Equity – Achieved**

EPLC's regulatory ROE achieved in 2022 was 6.09%, which falls within the +/-3% range of the deemed ROE of 9.00%. EPLC's regulatory average ROE is 6.89% for the five-year period from 2018 to 2022.

Note to Readers of 2022 Scorecard MD&A

The information provided by distributors on their future performance (or what can be construed as forward-looking information) may be subject to a number of risks, uncertainties and other factors that may cause actual events, conditions or results to differ materially from historical results or those contemplated by the distributor regarding their future performance. Some of the factors that could cause such differences include legislative or regulatory developments, financial market conditions, general economic conditions and the weather. For these reasons, the information on future performance is intended to be management's best judgement on the reporting date of the performance scorecard, and could be markedly different in the future.
