Ontario Energy Board Attention: Kirsten Walli, Board Secretary 2300 Yonge Street, 27th Floor P.O. Box 2319 Toronto, ON M4P 1E4

Dear Kirsten Wally:

Wellington North Power Inc. OEB Licence ED-2002-0511 EB-2010-0215 – Conservation and Demand Management 2011 Report

As set out in the Conservation and Demand Management Code section 2.2, please accept Wellington North Power's Annual CDM Report for January 1, 2011 to December 31, 2011.

The Annual CDM Report outlines Wellington North Power's activities in the promotion and delivery of Conservation initiatives under the provincial programs offered by the Ontario Power Authority.

If you have any questions regarding this submission, please contact: Ryan Roopnaraine at 519-323-1710 or by e-mail at roopnaraine@wellingtonnorthpower.com.

Yours truly,

Judy Rosebrugh President & CEO Wellington North Power Inc.

Cornerstone Hydro Electric Concepts (CHEC)

Combined Conservation and Demand Management Annual Report 2011

EB-2010-0215

Collaboration for Conservation

Cornerstone Hydro Electric Concepts Association Inc.

Executive Summary:

This represents the first year reporting as required by the CDM Code for the CHEC Association LDCs. The results and comments provided in this section are based on the combined experience of the CHEC LDCs.

The report format contains an overview section relating the combined experience of CHEC LDCs and twelve addendums containing the individual LDC Annual CDM Reports. The overview section provides a summary of the overall target achieved, conditions impacting strategy progress and a revised combined CDM Strategy.

The first year of the Strategy did not account for the amount of time which would be taken to develop initiatives and confirm appropriate delivery channels. Looking back on the plans filed, in many cases, the amount of target to be achieved in the first year was optimistic. Included in the Annual Report of each LDC is a revised CDM Strategy which takes into account the first year performance.

In 2011 all Provincial Programs were not available for launch. While this has had some impact it has not been critical to Strategy completion. The time to market for full delivery reduced the traction gained by previous programs and negatively impacted on program participation.

The lack of OEB Approved Programs will place a challenge on existing Provincial Programs to achieve the full target. Within the first year there was limited time to pursue OEB Approved Programs and to fully understand the requirements of program development.

The percentage of target achieved by each LDC has a high degree of variance. During the preparation of the Annual Report and revision to the Strategy, LDCs remain positive with respect to achieving the targets. In some instances it is recognized that reaching the full target will be a challenge, as noted in the attached LDC Reports. By building on the existing base and addition of resources such as the Roving Energy Manager and industry partners, the goal remains to achieve 100% of target.

Cornerstone Hydro Electric Concepts Association Inc.

1.0 Introduction:

Cornerstone Hydro Electric Concepts Association (CHEC) is an association of twelve (12) Local Distribution Companies (LDCs). The CHEC member LDCs have prepared this Conservation and Demand Management (CDM) Annual Report 2011 as required by the Conservation and Demand Management Code for Electricity Distributors. The report is a collaborative initiative of CHEC member LDCs and is consistent with the combined CDM Strategy filed in November 2010.

1.1 <u>Distributors Included in CHEC Association CDM Strategy:</u>

CHEC LDCs work collaboratively to meet regulatory and operational requirements. The Association facilitates LDCs' abilities to address initiatives in a cost effective manner, sharing information, expertise and resources. The development of a collaborative CDM Strategy and the subsequent CDM Annual Report is consistent with the CHEC philosophy of working together to meet the needs of the member LDCs and to work effectively for the customers served.

The LDCs, all members of CHEC, covered under this CDM Strategy include:

- Centre Wellington Hydro Ltd.
- COLLUS PowerStream (COLLUS Power)
- Innisfil Hydro Distribution Systems Limited
- Lakefront Utilities Inc.
- Lakeland Power Distribution Ltd.
- Midland Power Utility Corporation
- Orangeville Hydro Limited
- Parry Sound Power
- Rideau St. Lawrence Distribution Inc.
- Wasaga Distribution Inc.
- Wellington North Power Inc.
- West Coast Huron Energy Inc. (Goderich Hydro).

CHEC LDCs have worked collaboratively and as part of the Association since 2000. The CHEC Combined Annual Report includes an overview section and separate addendums for each LDC. The LDC addendum format follows the template developed by Hydro One and shared by the Electricity Distributors Association (EDA) with LDCs.

2.0 CDM Targets for Electricity Demand (MW) and Electricity Consumption (GWh):

The CDM target for each LDC has been established by the Ontario Energy Board (OEB) utilizing a methodology developed by the Ontario Power Authority (OPA). The CDM Strategy was based on the initial targets released to LDCs. The targets were later revised and incorporated into the LDC license requirements.

Table 1 illustrates the initial and revised targets for each LDC. The most recent targets have been incorporated into the revised CDM Strategy outlined in section 3.2 of each LDC's Addendum. The combined demand targets for CHEC LDCs increased by 3% while the combined energy targets decreased by 0.5%.

While the combined target remains relatively stable Table 1 illustrates that a number of LDC's experienced significant change regarding the target to achieve. Where the targets have increased significantly the CDM Strategy requires review to determine how best to meet these more aggressive targets.

Table 1 – OEB Defined Targets

		MW			GWH	
LDC	Initial Target	Revised Target	% Change	Initial Target	Revised Target	% Change
Centre Wellington Hydro	2.0	1.64	-18.0%	8.0	7.81	-2.4%

Total	22	22.65	3.0%	105	104.46	-0.5%

3.0 **Progress Toward Achieving Target**

Table 2 and Table 3 provide summaries of the progress made by CHEC LDCs in 2011 towards the combined demand target. The combined results are the summation for all member LDCs and represent reporting savings as per the OPA. The individual savings for each LDC are represented in the associated Addendum.

Table 2 Combined Net Demand Savings at End User Level Including DR Contribution

Implementation Period		Annual	(MW)									
	2011	2012	2013	2014								
2011 - Verified	3.906			3.906								
2012												
2013												
2014												
Verified N	et Annual Peak D	emand Savin	gs in 2014:	3.906								
Combined	CHEC 2014 Annua	al CDM Capac	ity Target:	22.65								
Verified Portion of Pe	eak Demand Savin	gs Target Ach	nieved (%):	17.2%								
Combined CHE	Combined CHEC Strategy, Milestone submitted for 201											
Variance:				1.9%								

Table 2 includes the contribution from Demand Response (DR) Initiatives as these represent action within the reporting period. The objective is to maintain the DR projects for the duration of the program.

Removal of the DR contribution results in the Peak Demand Savings being reduced to 1,832 kW which represents 8.1% of the 2014 target.

Table 3 Combined Net Energy Savings at End User Level

Implementation Period		Annual ((GWh)		Cumulative (GWh)
	2011	2012	2013	2014	2011-2014
2011 - Verified	8,372	8,372	8,3712	8,372	33,488
2012					
2013					
2014					
Verif	ied Net Cum	nulative Energ	gy Savings 2	011-2014:	33,488
Combined CH	IEC 2011-20	14 Cumulativ	e CDM Ener	gy Target:	104,460
Verified Port	ion of Cumu	lative Energy	Target Ach	ieved (%):	32.1%
Combined	I CHEC Strat	egy, Milestor	ne submitte	d for 2011	-41.6%
Variance :					-9.5%

Contribution towards the peak target progressed well in the first year. The portion of target achieved when the 2010 contribution and 2011 projects including DR are counted, is generally on target.

Removal of the DR component would clearly indicate that the peak target is behind expectations. Within the initial strategies DR was to account for 413 kW versus the 1,602 kW reported. This interest in DR from customers is encouraging as it indicates the capacity within the customer base to adjust for demand response. Further initiative in this area will be an important element to achieving the peak target.

While behind expectations the energy savings achieved in the first year represents a reasonable portion of the total target. The kWh from pre-2011 projects assisted in the 2011 achievement and helped to offset the slower than anticipated start to the 2011 initiatives.

The combined demand and energy performance of the CHEC LDCs are generally in line with the overall performance across the province. LDC performance vary due to local parameters which are addressed in the addendums.

4.0 General Conditions Impacting Strategy Performance:

This section outlines issues which have impacted on the progress of Strategies. Early in the first year challenges with "getting going" and the associated impact became a reality. However, it is also fair to say that the work completed at that time, while taking longer than anticipated, set a strong base for conservation. The work completed not only developed a selection of conservation initiatives but also established criteria for the CDM marketplace moving forward.

4.1 <u>Design, Release and Operational Delivery:</u>

The CDM Strategy filed in November 2010 noted: "CDM Strategies can be further impacted by the Provincial Programs if the expected program design and release date do not meet the current schedules as set by the OPA." At the time of preparing the CDM Strategy the OPA and LDC representatives were working to design programs and the associated schedules to form the legal agreements to implement the programs. Strategies were developed with an optimistic expectation that the full program suite and delivery would be available in time to allow (in general terms) a full twelve months of program delivery. At the end of 2011 all Provincial Programs Initiatives were not designed and available for inclusion in the marketplace.

While the OPA and the LDC representatives are to be commended on the sheer volume of work completed and the programs designed, the release dates were delayed. Further, the schedules were very detailed, forming a complex working relationship to ensure accountability in the delivery. Reviewing the schedules to fully understand the deliverables and to determine how best to deliver the programs became a key element and time constraint. In those early days of reviewing schedules there were often discussions as to interpretation, which further complicated acceptance and implementation. The initial stage to understand and put in place the delivery of programs was underestimated when preparing the CDM Strategy.

The timing for the review stage and the ability to implement delivery channels in short order became problematic. Key initiatives such as Direct Install and ERIP were focused on to take advantage of the familiarity with the programs and the availability of past delivery partners. The previous experience would allow faster "to market" dates. Other initiatives were put on hold at the local level and in some cases by the OPA while initiatives more central to meeting the targets were fine tuned for delivery.

Market partners including delivery agents and electrical contractors were equally frustrated during this initial period. Delivery agents had lost momentum and would require a higher level of retooling than initially anticipated. Contractors who had experience in ERIP and had delivered a number of programs were finding it difficult to move projects forward. The full requirements of the new schedules and program processes were not fully established to support program delivery.

While the time to market was longer than anticipated the initiatives as they went into market were well received as a continuation of existing programs. During that time the OPA continued

to run central initiatives such as the appliance and coupon initiatives. This allowed target to be achieved and maintained some presence in the marketplace. The success of these programs and contribution to target are evident on the details of Annual Reports. In many instances these programs met or exceeded the annual contribution to targets.

4.2 <u>CRM:</u>

The initiative to develop a comprehensive CRM system resulted in lost time in the initial stages. While the concept of a comprehensive system was supported, the system was still being developed during the launch, which required time for LDC staff to learn, problem solve and with the next update, relearn. At the same time OPA staff worked to provide the next system upgrade and respond to the questions from LDC staff. It is anticipated that the CRM system once fully implemented will provide a good portal for customers and LDC staff.

The expectation of a functional CRM and the lack of alternate systems forced market participants to utilize a system which did not appear to be ready for general application. The system while frustrating LDCs also frustrated contractors as they worked to initiate programs in the early stages of 2011. This resulted in disenchanted participants as well as the need for work- arounds, which generally involved LDC staff dealing with a paper copy of applications. Contractor engagement suffered during this period.

4.3 **Pre-2011 Projects Completed in 2011:**

Inclusion of pre-2011 projects completed in 2011 in the contribution to target is consistent with the Ministry Directive to capture incremental savings after January 1, 2011 and was welcomed by LDCs. Towards the end of 2010 as programs were said to be reaching their end date, there was an increase in activity with many projects moving forward at the application stage. The need to continue to work with the proponents and to support the application and payment process remained well into 2011.

The pre-2011 projects account for 10 % of the first year kW savings and 25% of the kWh savings. In service territories where there was significant project activity in late 2010 the projects assisted to offset the slow start into the 2011 projects. This rush to get projects complete under the current program (2010) may have consumed projects slated for the following year.

4.4 Support Position – Roving Energy Manager:

In 2011 CHEC LDCs applied for a Roving Energy Manager (REM) to assist with larger customers. The more sophisticated systems and processes in these facilities require a detailed review and understanding. Acquiring a REM, for the combined group of LDCs, was the most effective way to increase the resources available. Individually the LDCs would not be eligible for REM support or for Key Account Managers and hence required a combined application.

Application for the REM was made in mid-2011 however final approval was not received until January 2012. A project to hire a REM will be instituted in 2012 to utilize the additional funding and capacity enhancement of the REM position and to better impact on future results. (Position filled September 2012)

4.5 Reporting of Results:

The gathering of market information and impact of marketing activities has been difficult to determine. The reporting cycle of Consumer Provincial Programs is extended to three months after the quarter finishes. This extended time period makes it difficult to determine the results any local activity has on the outcome.

Reporting through the CRM has improved and provides some insight to project activity for follow up on the local level. It is anticipated the CRM system will continue to improve and provide useful information for project management.

4.6 Return on Investment of Initiatives:

Some indication has been shared with LDCs that the return on investment to fill out applications for the level of incentive available may not be sufficient. The amount of information required, the format and the time required limits the return and hence the interest. This could impact on subsequent applications from participants who have utilized at least one program. The ability to support and problem solve these issues will be required. Incentive levels will also require review to ensure they meet both the TRC and return for the participant.

A further consideration is the ability to make changes to the programs based on input from the field. When delivery issues such as reduced profit margins for contractors due to increasing supply costs become apparent, the time for review and remedial action needs to be reduced. Responsive solutions to field concerns will maintain the interest of delivery agents, partners and customers.

4.7 **OEB Approved Programs:**

OEB Approved Programs were included in 6 of the 12 LDCs Strategies filed in 2010. Initially it was anticipated that OEB Approved Programs would form a part of the results within the Strategy.

In the first year LDCs focused on implementing Provincial Programs with limited attention to developing programs for OEB approval. The ability to fully understand the evaluation, measurement and verification process was not within the scope of CHEC LDCs. Further the need to avoid any duplication with provincial initiatives limited potential program concepts. Further consideration of the options for OEB Approved programs is required.

4.8 **DR 3 Contribution:**

The Annual Reports contain an element of DR 3 within the reporting. Because DR may not persist to December 2014 the OPA has removed any contribution from the 2014 total. However as DR represents an indication of activity level of LDC customers and the industry in general, the impact of DR 3 should be considered in the interim years. As the contributions of DR 3 participants are evaluated it may be in the best interest of the LDC and the industry to work to maintain the participant within the program. For reporting purposes DR has been included in this report.

Demand response programs can be significant in the overall reduction of target. As noted in Section 3 DR represents a significant portion of the savings in the first year. To achieve the overall target LDCs will need to not only focus on promoting the option to customers but help ensure customers remain in the program beyond 2014. LDCs who have achieved well in the peak target in the first year often include some portion of DR. Service territories with limited ability for DR may experience difficulty in meeting the demand target.

5.0 Revised CDM Strategy:

The Addendums for each LDC contains a revised CDM Strategy in Section 3.2. The CDM Strategy in Section 3.2 incorporates the revised targets, the actual savings achieved in 2011 and adjustments to future years. To prepare the Revised Strategy the results of 2012, Q1 for Provincial Programs and CRM data were utilized to inform the development of the revision. The combined strategy for the 12 CHEC LDCs is summarized in Table 4.

The revised Strategies anticipate a total of 23.1 MW and 113.1 GWh to be saved over the four year period. These results are just above the target set for the LDCs.

Within this envelop 8 of the 12 LDCs expect to meet the requirements of both demand and energy targets while 2 of the 12 LDCs anticipate challenges to meet one of the targets and 2 LDCs have concerns about meeting either of the targets.

The ability to meet the proposed targets will be facilitated by a number of activities over the future years including:

- Roving Energy Manager to assist with larger industrial customers
- Peak Saver Plus to focus on residential demand
- Enhanced focus on support of Provincial Initiatives to help offset the lack of OEB Approved Programs.

The specific of activities associated with each LDC is outlined in the Addendums.

Executive Summary

Wellington North Power Inc (WNP) is submitting its Conservation Demand Management (CDM) results for the reporting year of 2011, in conjunction with the Cornerstone Hydro Electric Concepts (CHEC). WNP is a member of the CHEC group, which collectively filed a CDM strategy submission (EB-2010-0215) on November 1st, 2010. This document is an Addendum number (11) to the joint filing by CHEC.

Detailed within this report are the final results provided by the Ontario Power Authority (OPA) and the experience of WNP's implementation of the OPA's CDM programs. The report generally follows the template prepared by Hydro One and shared with LDCs through the Electricity Distribution Association (EDA), and summarizes the efforts of WNP and other CHEC members in working collaboratively to meet the CDM targets for its member LDCs.

The activity over the first year resulted in **37kW** and **590,816 kWh** savings as identified by the OPA for Provincial Programs. For 2011 no OEB Approved Programs were delivered.

Contribution to Targets				
Program-to-Date: Net Program-to-Date: 2				
Annual Peak Demand	2014 Net Cumulative			
Savings (kW) in 2014 Energy Savings (k)				
15	304,216			
21	285,493			
0	0			
0	0			
0	1,108			
37	590,816			

The savings achieved by WNP during the first year are summarized in the table below.

Year	Targ	et	OPA Results		% of Target	
	kWh	kW	kWh	kW	kWh	kW
2011	452,000	93	590,816	37	131%	40%
2012	904,000	186				
2013	1,356,000	279				
2014	1,808,000	372				
OEB 2011-2014 Target	4,520,000	930	590,816	37	13%	4%

(Note: the above table applies target forecasting of 10% in 2011, 20% in 2012, 30% in 2013 and 40% in 2014 of the overall OEB allocated CDM target)

The tables below summarize WNP's results for 2011 as extracted from the OPA 2011 Final Report.

WNP filed its strategy November 1st, 2010 which contained the forecasted targets to achieve the OEB allocated provincial measures. As illustrated in the tables above WNP's actual 2011 results were different to those projected forecasts filed in the original CDM strategy. (It should be noted that the revised OEB targets were not included in WNP CDM strategy that was filed November 1st 2010. The decreased target has been reflected in the WNP's revised CDM Strategy - as per section 3.2 CDM Strategy Modifications).

WNP remains confident in its ability to achieve the targets over the remaining three years based upon the increased level in customer awareness generated by the promotion of the programs in 2011. WNP has utilized the Final Annual Report for 2011, provided by the OPA, to revise the LDC's planning and implementation of the OPA CDM programs going forward.

In the Initial year (2011) Provincial Programs contributed to only a partial year of market delivery for some of the initiatives. The challenges encountered finalizing the "Master CDM Program Agreement and Schedules", resulted in delays with the launch of new programs by several months. Once the Schedules were released, reviewed and WNP contracted with the Ontario Power Authority, the LDC was tasked with determining the best delivery mechanism of the programs.

Provincially delivered programs enabled Wellington North Power to actively support the initiatives through continued marketing efforts. For the vast majority of programs, service delivery partners and processes were required which took time and expertise to develop. These early delays along with general readiness of the support systems for the programs impacted on the first year uptake by customers. It is anticipated, systems and experience developed in 2011 will assist moving forward with program delivery and energy savings in subsequent years.

Given the delays getting to market, WNP's focus became the delivery of programs our customers were familiar with, such as ERIP and Direct Install (now branded as Efficiency; Equipment Replacement Program and Direct Installed Lighting). The LDC is reliant on these programs to meet a substantial amount of its overall targets. During the 2011 program year, WNP focused upon the implementation of initiatives that would offer the greatest amount of sustainable energy savings to customers.

Following the release of the OPA Programs in 2011, WNP contacted its General Service >50 kW customers. The objective of this contact was to communicate the benefits of undertaking a full energy audit of their facility to demonstrate the effectiveness of energy savings that could be achieved through the participation in OPA programs. The energy audits provided valuable information to identify those projects that represent the most cost-effective savings to the customer as well as contributing to WNP's CDM targets.

As the OPA's programs rolled-out during 2011, WNP engaged local electrical contractors to educate them on the OPA's programs. The contractors were invited to breakfast meetings to engage and inform them of the energy savings initiatives available from the OPA. As a result of these sessions and subsequent follow-up meetings, WNP confirms only two local contractors have taken a serious interest in the CDM programs. Feed-back from these electrical contractors is they are too busy with other jobs to participate and the paperwork involved with project approval is cumbersome.

In order to mitigate the risk associated with local contractors not taking up the OPA's CDM challenge, in Quarter 4 of 2011, WNP worked with contractors outside of the LDC's service area specializing in CDM programs. As a result of this decisive action, WNP experienced a marked increase in customer participation in the Direct Install initiative.

Wellington North Power Inc. 2011 CDM Annual Report: EB-2010-0215 September 30, 2012 Page 8 of 59

Wellington North Power trained an employee in Conservation and Demand Management through 2010/2011. The employee achieved a CDM Specialist Certificate from MEARIE, as well as knowledge gained from Ontario Power Authority sessions. The knowledge gained has helped to drive-forward the delivery of the CDM programs more effectively, with a clear direction and complete understanding of the OPA programs, which has increased the LDC's ability in achieving the mandated OEB CDM targets.

Looking forward for the period 2012 to 2014, WNP will continue on its path towards achieving the allocated share of the provincial CDM target. With the ground work, planning and experience gained in 2011, WNP anticipate an increase in customer participation in the OPA CDM programs and an increase in targeted savings.

Background

On March 31, 2010, the Minister of Energy and Infrastructure of Ontario, under the guidance of sections 27.1 and 27.2 of the *Ontario Energy Board Act, 1998*, directed the Ontario Energy Board (OEB) to establish Conservation and Demand Management (CDM) targets to be met by Ontario electricity distributors. Accordingly, on November 12, 2010, the OEB amended the distribution licence ED-2002-0511 of Wellington North Power Inc., as a condition of its licence, to achieve 4.52 GWh of energy consumption savings and 0.93 MW of summer peak demand savings, over the period beginning January 1, 2011 through December 31, 2014.

In accordance with the same Minister's directive, the OEB issued the Conservation and Demand Management Code for Electricity Distributors (the Code) on September 16, 2010. The code sets out the obligations and requirements with which electricity distributors must comply in relation to the CDM targets set out in their licences. To comply with the Code requirements, WNP submitted its CDM Strategy EB-2010-0215 on November 1st 2010, which included a high level overview of how WNP intended to achieve its CDM targets together with forecasted projections based upon information and knowledge available at that time.

The Code also requires a Distributor to file annual report with the Ontario Energy Board. This Annual Report is therefore prepared accordingly and covers the period from January 1, 2011 to December 31, 2011.

1.0 Board-Approved CDM Programs

1.1 Introduction

In its Decision and Order dated November 12 2010 (EB-2010-0215 & EB-2010-0216), the OEB ordered that, (to meet its mandatory CDM targets), "Each licenced electricity distributor must, as a condition of its licence, deliver Board-Approved CDM Programs, OPA-Contracted Province-Wide CDM Programs, or a combination of the two".

1.2 TOU Pricing

In 2011, the implementation of Time-of-Use ("TOU") Pricing was the only Board-Approved Conservation and Demand Management ("CDM") program available. WNP was exempt from TOU Billing until January 31, 2012 (as per Decision and Order EB-2011-0114) and therefore in the OPA Final Report for 2011, there is no TOU savings allocated to this LDC for this initiative for this reporting period.

1.2.1 Background

In its April 26, 2012 CDM Guidelines EB-2012-0003, the OEB recognizes that a portion of the aggregate electricity demand target was intended to be attributable to savings achieved through the implementation of Time Of Use (TOU) Pricing. The OEB establishes the rates for TOU pricing and has made the implementation of this pricing mechanism mandatory for distributors. On this basis, the OEB has determined that distributors will not have to file a Board-Approved CDM program application regarding TOU pricing. The OEB has deemed the implementation of TOU pricing to be a Board-Approved CDM program for the purposes of achieving the CDM targets. The costs associated with the implementation of TOU pricing are recoverable through distribution rates, and not through the Global Adjustment Mechanism ("GAM").

In accordance with a Directive dated March 31, 2010 by the Minister of Energy and Infrastructure, the OEB is of the view that any evaluations of savings from TOU pricing should be conducted by the Ontario Power Authority (OPA) for the province, and then allocated to distributors.

Wellington North Power will not have Time of Use saving to report in 2011, as our implementation date for TOU billing was January 31, 2012.

Page 10 of 59

Within the scope of the CDM Strategy, no contribution from TOU has been included. It should be noted that once the mechanism to report the TOU savings has been issued by the OPA and approved, WNP may adjust its CDM strategy to reflect these associated energy savings.

1.2.2 TOU Program Description

Target Customer Type(s): Residential and Small General Service customers (up to 250,000 kWh per year).

Initiative Frequency: Monthly

Objectives: Time of Use pricing is designed to incent the shifting of energy usage. Therefore peak demand reductions are expected and energy conservation benefits may also be realized.

Description: In August of 2010, the OEB issued a final determination to mandate TOU pricing for Regulated Price Plan ("RPP") customers by June 2011, in order to support the Government's expectation for 3.6 million RPP consumers are to be on TOU pricing by June 2011, to ensure that smart meters funded at ratepayer expense are being used for their intended purpose.

The RPP TOU price is adjusted twice annually by the OEB, in May and November. A summary of the RPP TOU pricing is provided below:

Delivery: The OEB sets the rates; LDCs install and maintain the smart meters; WNP convert customer hourly consumption readings to TOU for billing.

Initiative Activities/Progress:

At December 31st, 2011 WNP had not transitioned any customers to TOU billing. The transition to TOU billing for this LDC occurred on January 31st 2012 which will have an impact in future years of the CDM energy savings.

1.3 Wellington North Power Inc. Applications with the OEB

Wellington North Power did not make application for Board-Approved Programs in 2011. The first year of the CDM program focused on developing the infrastructure to support and deliver the Ontario Power Authority Provincial Programs.

While it is recognized that OEB Approved Programs may be required to ultimately meet the CDM targets, initial review of potential programs have indicated there are issues with ensuring the programs do not replicate any of the deliverables of the past or current Provincial Programs. Therefore, in the case of Wellington North Power, with no Ontario Energy Board Approved Programs to utilize, it has placed emphasis solely upon the inception and delivery of the Provincially Contracted Programs offered by the Ontario Power Authority in order to meet the CDM Strategy Targets.

2.0 OPA-Contracted Province-Wide CDM Programs

2.1 Introduction

Effective March 2011, WNP entered into an Agreement with the OPA to deliver CDM programs extending from January 1, 2011 to December 31, 2014, which is listed below. In addition, those initiatives that were projects that started pre-2011 and completed in 2011 have been included in the OPA Final Annual Report for 2011.

Initiative	Schedule		Date schedule posted	Customer Class
Residential Program				
Appliance Retirement	Schedule B-1, Exhibit D		Jan 26 2011	All residential rate classes
Appliance Exchange	Schedule B-1, Exhibit E		Jan 26 2011	All residential rate classes
HVAC Incentives	Schedule B-1, Exhibit B		Jan 26 2011	All residential rate classes
Conservation Instant Coupon Booklet	Schedule B-1, Exhibit A		Jan 26 2011	All residential rate classes
Bi-Annual Retailer Event	Schedule B-1, Exhibit C		Jan 26 2011	All residential rate classes
Retailer Co-op			Jan 26 2011	All residential rate classes
Residential Demand Response	Schedule B-3		Aug 22 2011	All general service classes
New Construction Program	Schedule B-2		Jan 26 2011	All residential rate classes
Commercial & Institutional Program				
Efficiency: Equipment Replacement	Schedule C-2		Jan 26 2011	All general service classes
Direct Install Lighting	Schedule C-3	Schedule C-3		General Service < 50 kW
Energy Audit	Schedule C-1		26-Jan-11	All general service classes
Industrial Program				
Efficiency: Equipment Replacement Incentive (part of th	e Schedule C-2		31-May-11	General Service 50 kW & above
Demand Response 3	Schedule D-6		31-May-11	General Service 50 kW & above
Pre-2011 Programs completed in 2011				
Electricity Retrofit Incentive Program	n/a	n/a		All general service classes

Several Initiatives that were included in the Schedules were not in the market in 2011. The OPA has communicated that the Initiatives listed in the table below were not in the market in 2011 and that they represent a very small percentage* of the forecasted energy and demand savings. The CDM Strategy filed did not contain any of the initiatives shown in the table below, however these do not contribute to any energy savings in 2011.

Initiative Not in Market in 2011	Objective	Status
Residential Program		
Midstream Electronics	The objective of this initative is to encourage retailers to promote, and sell, high efficency televisions, and for distributors to distribute high efficiency set top boxes.	Not launched to market
Midstream Pool Equipment	The objective of this Initiative is to encourage pool installers to sell and install efficient pool pump equipment in residential in-ground pools.	Not launched to market
First Nations Program	First Nations programs are delivered by the OPA and results are attributed to LDCs for reporting.	Not launched to market
Home Energy Audit Tool	This is a provincial online audit tool to engage customers in conservation and help drive customer participation to CDM programs.	Not launched to market
Commercial & Institutional Program		
Direct Service Space Cooling	The objective of this Initiative is to offer free servicing of air conditioning systems and refrigeration units for the purpose of achieving energy savings and demand reduction.	Not launched to market in 2011. As per the OPA, there are no plans to launch this Initiative 2012.
Demand Response 1 (DR1)	This Initiative allows distribution customers to voluntarily reduce electricity demand during certain periods of the year pursuant to the DR 1 contract. The Initiative provides DR payment for the actual electricity reduction provided during a demand response event.	No customer uptake for this Initiative
Industrial Program		
Demand Response 1 (DR1)	As above	No customer uptake for this Initiative

During the 2011 program year, the OPA placed emphasis on supporting the implementation of Initiatives that would offer the greatest ratepayer savings and largest amount of sustainable energy reduction. This approach recognized the resource management at both the OPA and WNP to initiate such a comprehensive suite of initiatives.

The Master CDM Program Agreement includes a program change management provisions in Article 3. Collaboration between the OPA and the Local Distribution Companies (LDCs) commenced in 2011 as the change management process was implemented to enhance the <u>saveONenergy</u> program suite. The change management process allows for modifications to the Master Service Agreement and Initiative Schedules. The program enhancements give LDCs

Wellington North Power Inc. 2011 CDM Annual Report: EB-2010-0215 September 30, 2012 Page 14 of 59

additional tools and greater flexibility to deliver programs in a way that meets the needs of customers and further drives participation in the Initiatives.

2.2 Program Descriptions

2.2.1 RESIDENTIAL PROGRAM

2.2.1.1 APPLIANCE RETIREMENT INITIATIVE (Exhibit D)

Target Customer Type(s): Residential Customers

Initiative Frequency: Year round

Objectives: Achieve energy and demand savings by permanently decommissioning certain older inefficient refrigeration appliances.

Description: This is an energy efficiency Initiative that offers individuals and businesses free pick-up and decommissioning of old large refrigerators and freezers. Window air conditioners and portable dehumidifiers will also be picked up if a refrigerator or a freezer is being collected.

Targeted End Uses: Large refrigerators, large freezers, window air conditioners and portable dehumidifiers.

Delivery: OPA centrally contracts for the province-wide marketing, call centre, appliance pick-up and decommissioning process. LDC's provide local marketing and coordination with municipal pick-up where available.

Additional detail is available:

- Schedule B-1, Exhibit D
 http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/current electricity contracts/pdfs/Schedule%20B-1%20Residential%20Program.pdf
- Saveonenergy websitehttps://saveonenergy.ca/Consumer/Programs/Appliance-Retirement.aspx

Initiative Activities/Progress:

The continuation of the program allowed for relatively seamless transition from the previous program. The Appliance Program continued to be promoted in local advertising including: Front office displays, newspaper advertising and website access.

In Market Date: March 06, 2011

Wellington North Power Inc. 2011 CDM Annual Report: EB-2010-0215 September 30, 2012 Page 16 of 59

Lessons Learned:

The Appliance Retirement Initiative (previously The Great Refrigerator Round-Up) has

been offered by LDCs since 2007. This Initiative is approaching market saturation, with

very few refrigerators being collected as a result of the duration of this program.

• While the OPA and the LDCs have reviewed this Initiative to assess whether to include

other products, appliances have a natural life cycle and the Initiative cannot be expected

to continually deliver the high level of results in perpetuity. These lower expectations have been taken into account when developing conservation portfolios. Based on the

first year results the contribution of the appliance retirement program may be

overstated in the CDM Strategy filed with the Board.

This Initiative now faces some competition from independent retailers and

municipalities.

Results are very responsive to province wide advertising.

Offering weekend pickups would have increased participation levels.

2.2.1.2 APPLIANCE EXCHANGE INITIATIVE (Exhibit E)

Target Customer Type(s): Residential Customers

Initiative Frequency: Spring and Fall

Objective: The objective of this Initiative is to remove and permanently decommission older,

inefficient window air conditioners and portable dehumidifiers.

Description: This Initiative involves appliance exchange events. Exchange events are held at

local retail locations and customers are encouraged to bring in their old room air conditioners

(AC) and dehumidifiers in exchange for coupons/discounts towards the purchase of new energy

efficient equipment.

Targeted End Uses: Window air conditioners and portable dehumidifiers

Delivery: OPA contracts with participating retailers for collection of eligible units. LDCs provide

local marketing.

Additional detail is available:

- Schedule B-1, Exhibit E
 http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/current electricity contracts/pdfs/Schedule%20B-1%20Residential%20Program.pdf and
- Saveonenergy website https://saveonenergy.ca/Consumer.aspx

Initiative Activities/Progress:

There was one retailer in WNP service area active in this initiative.

In Market Date: March 06, 2011

Lessons Learned:

- The single retailer in WNP's service area did participate with this initiative; however the advertising of the event by the OPA listed only Hydro One as the distributor for the program. Consequently, any energy savings attributed to this event were "incorrectly" attributed to Hydro One, instead of the local LDC (WNP).
- Province-wide: the Spring event had the participation of 3 retailers with 300 400 locations across the province. However, the Fall 2011 event had no retailer participation, therefore savings budgeted by the LDCs did not materialize.
- Evaluation, Measurement, and Verification (EMV) results indicated that the value of savings for retired room Air Conditioning has reduced.
- The Initiative may be reaching market saturation.
- The type of unit turned in is very dependent upon what is promoted by the retailers.
- The return on investment of running an event will be limited on the number of retailers involved and the customer base of the LDC.
- Previous experience showed that communication to the local retailer level from the regional level was slow and problematic. Often the local store did not have any understanding of what event was to be held or the coordination with the LDC.
- LDCs were often given minimal space in the store reducing the profile of the display.

Page 18 of 59

2.2.1.3 **HVAC INCENTIVES INITIATIVE (Exhibit B)**

Target Customer Type(s): Residential Customers

Initiative Frequency: Year round

Objective: The objective of this Initiative is to encourage the replacement of existing heating systems with high efficiency furnaces equipped with Electronically Commutated Motors (ECM), and to replace existing central air conditioners with ENERGY STAR qualified systems and

products.

Description: This is an energy efficiency Initiative that provides rebates for the replacement of old heating or cooling systems with high efficiency furnaces (equipped with ECM) and Energy Star qualified central air conditioners by approved Heating, Refrigeration, and Air Conditioning Institute (HRAI) qualified contractors.

Targeted End Uses: Central air conditioners and furnaces

Delivery: OPA contracts centrally for delivery of the program. LDCs provide local marketing and encourage local contractors to participate in the Initiative.

Additional detail is available:

• Schedule B-1, Exhibit B

http://www.powerauthority.on.ca/sites/default/files/new files/industry stakeholders/ current electricity contracts/pdfs/Schedule%20B-1%20Residential%20Program.pdf and

Saveonenergy website https://saveonenergy.ca/Consumer.aspx

Initiative Activities/Progress:

WNP hosted a Conservation Information session with contractors, developers and builders to promote and share information. The activity to date has relied on the local HVAC partners and advertising done by the OPA. Local contractors within WNP's service area have demonstrated limited interest towards the program; however the LDC will continue to promote this initiative within our service area.

In Market Date: March 06, 2011

Lessons Learned:

Contractor engagement is a highly effective method of connecting with customers; however local HVAC contractors require timeliness of the Rebate process to maintain a

positive relationship between consumers, contractors, the OPA, and the participating LDC.

- There appears to be spillover from non-HRAI contractors who are ineligible for this
 Initiative. There are cases where smaller independent contractors are offering their own
 incentives (by discounting their installations to match value of the OPA incentive) to
 make the sale. As this occurs outside of the Initiative, these installations are not being
 attributed to any LDC.
- The NRCan program assisted the awareness and participation in the program.

2.2.1.4 CONSERVATION INSTANT COUPON BOOKLET INITIATIVE (Exhibit A)

Target Customer Type(s): Residential Customers

Initiative Frequency: Year round

Objective: The objective of this Initiative is to encourage households to purchase energy efficient products by offering discounts.

Description: This Initiative provides customers with year round coupons. The coupons offer instant rebates towards the purchase of a variety of low cost, easy to install energy efficient measures and can be redeemed at participating retailers. Booklets were directly mailed to customers and were also available at point-of-purchase. Downloadable coupons were also available at www.saveoneenergy.ca.

Targeted End Uses: ENERGY STAR® qualified standard compact fluorescent lights (CFLs), ENERGY STAR® qualified light fixtures, lighting control products, weather stripping, hot water pipe wrap, electric water heater blanket, heavy duty plug-in timers, advanced power bars, clothesline, baseboard programmable thermostats.

Delivery: The OPA contracts centrally for the distribution of the coupon booklets across Ontario. LDCs distribute coupons at local events and market the Initiative locally. The OPA enters into agreements with retailers to honour the coupons.

Additional detail is available:

Schedule B-1, Exhibit A
 http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/current_electricity_contracts/pdfs/Schedule%20B-1%20Residential%20Program.pdf and

Saveonenergy website https://saveonenergy.ca/Consumer.aspx

Initiative Activities/Progress:

WNP began to actively promote the coupons with Point-of-Sale advertising and local distribution of coupons at retail outlets and the LDC's customer service location. Also, downloadable coupons could be obtained from the **saveONenergy** website.

In Market Date: March 06, 2011

Lessons Learned:

- The timeframe for retailer submission of redeemed coupons vary from retailer to retailer and in some cases has been lengthy. This delays the results reporting, which in turn limits the OPA and LDC abilities to react and respond to Initiative performance or changes in consumer behaviour.
- The Product list should be distinctive from the Bi-Annual Retailer Event Initiative in order to gain more consumer interest and uptake.
- Program evolution, including new products (for example, LED lighting) and review of incentive pricing for the coupon Initiatives, should be a regular activity to ensure continued consumer interest.

2.2.1.5 BI-ANNUAL RETAILER EVENT INITIATIVE (Exhibit C)

Target Customer Type(s): Residential Customers

Initiative Frequency: Bi-annual events

Objective: The objective of this Initiative is to provide instant point of purchase discounts to individuals at participating retailers for a variety of energy efficient products.

Description: Twice a year (Spring and Fall), participating retailers host month-long rebate events. During the months of April and October, customers are encouraged to visit participating retailers where they can find coupons redeemable for instant rebates towards a variety of low cost, easy to install energy efficient measures.

Targeted End Uses: As per the Conservation Instant Coupon Booklet Initiative

Delivery: The OPA enters into arrangements with participating retailers to promote the discounted products, and to post and honour related coupons. LDCs also refer retailers to the OPA and market this Initiative locally.

Additional detail is available:

- Schedule B-1, Exhibit C
 http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/
 current electricity contracts/pdfs/Schedule%20B-1%20Residential%20Program.pdf and
- Saveonenergy website https://saveonenergy.ca/Consumer.aspx

Initiative Activities/Progress:

WNP monitored participating retailers to ensure in store coupons have been available.

In Market Date: March 06, 2011

Lessons Learned:

- The Product list has changed very little over the past four years.
- Program evolution, including new products (for example, LED lighting) and review of incentive pricing for the coupon Initiatives, must be a regular activity to ensure continued consumer interest.
- The Product list should be distinctive from the Conservation Instant Coupon Booklet
 Initiative in order to gain more consumer interest and uptake.
- A review conducted by the Residential Working Group in Q4 2011 identified three areas
 of need for Initiative evolution: 1) introduction of product focused marketing; 2)
 enhanced product selection and 3) improved training for retailers.

2.2.1.6 RETAILER CO-OP

Target Customer Type(s): Residential Customers

Initiative Frequency: Year round

Objective: Hold promotional events to encourage customers to purchase energy efficiency measures (and go above-and-beyond the traditional Bi-Annual Coupon Events).

Description: The Retailer Co-op Initiative provides LDCs with the opportunity to work with retailers in their service area by holding special events at retail locations. These events are typically special promotions that encourage customers to purchase energy efficiency measures (and go above-and-beyond the traditional Bi-Annual Coupon Events).

Targeted End Uses: As per the Conservation Instant Coupon Booklet Initiative

Delivery: Retailers apply to the OPA for co-op funding to run special promotions that promote energy efficiency to customers in their stores. LDCs can refer retailers to the OPA. The OPA provides each LDC with a list of retailers who have qualified for Co-Op Funding as well as details of the proposed special events.

Initiative Activities/Progress:

Due to limited resources and minimal retail outlets in WNP's service area, this initiative did not prove as effective as the 'Appliance Exchange Program' or the 'Coupon Event'.

In Market Date: March 06, 2011

Lessons Learned:

- The availability of retailer and/or LDC staff with product knowledge and the ability to conduct demonstration in store during the events would be an asset. This could be a valuable role for LDCs.
- In service territories where there are multiple LDCs in close proximity coordination of staffing and promotion may be appropriate.
- LDC service areas with a limited number of participating retailer outlets, has proven to be challenge.

2.2.1.7 NEW CONSTRUCTION PROGRAM (Schedule B-2)

Target Customer Type(s): Residential Customers

Initiative Frequency: Year round

Objective: The objective of this Initiative is to provide incentives to participants for the purpose of promoting the construction of energy efficient residential homes in the Province of Ontario.

Description: This is an energy efficiency Initiative that provides incentives to homebuilders for constructing new homes that are efficient, smart, and integrated (applicable to new single family dwellings). Incentives are provided in two key categories as follows:

- o Incentives for homebuilders who install electricity efficiency measures as determined by a prescriptive list or via a custom option.
- Incentives for homebuilders who meet or exceed aggressive efficiency standards using the EnerGuide performance rating system.

Targeted End Uses: All-off switch, ECM motors, ENERGY STAR qualified central a/c, lighting control products, lighting fixtures, Energuide 80+ whole homes.

Delivery: Local engagement of builders will be the responsibility of the LDC and will be supported by OPA air coverage driving builders to their LDC for additional information.

Additional detail is available:

- Schedule B-2
 http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/current_electricity_contracts/pdfs/Schedule%20B-2%20New%20Construction%20Program.pdf and
- Saveonenergy website https://saveonenergy.ca/Consumer.aspx

Initiative Activities/Progress:

WNP service territory has been experiencing a low growth, limiting the number of new building construction opportunities for the initiative at this time.

In Market Date: June 2011.

Lessons Learned:

- Due to the complexity of the online application process, this initiative has not gained momentum with builders and developers within WNP's service area.
- Single unit contractors stated the incentives were not significant enough to justify the time spent on the application process.
- Administrative requirements must align with perceived stakeholder payback. Changes are being processed through change management for 2012.
- Opportunities are being sought to ensure that whatever limited building does occur they are aware of the opportunity and assistance to apply.

2.2.1.8 RESIDENTIAL DEMAND RESPONSE PROGRAM (Schedule B-3)

Target Customer Type(s): Residential and Small Commercial Customers

Initiative Frequency: Year round

Objective: The objectives of this Initiative are to enhance the reliability of the IESO-controlled grid by accessing and aggregating specified residential and small commercial end uses for the purpose of load reduction, increasing consumer awareness of the importance of reducing summer demand and providing consumers their current electricity consumption and associated costs.

Description: In **peaksaver**PLUS ™ participants are eligible to receive a free programmable thermostat or switch, including installation. Participants also receive access to price and real-time consumption information on an In Home Display (IHD). LDCs were given the choice to continue to offer the standard load control program (programmable thermostat or switch with a \$25 bill credit) for the first 8 months of 2011 (referred to as **peaksaver**®Extension). After August 2011, the Extension ended and the program (including marketing) ceased until new IHD product were available.

Targeted End Uses: Central air conditioning, electric hot water heaters and pool pumps

Delivery: LDC's recruit customers and procure technology

Additional detail is available:

- Schedule B-3
 http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/current_electricity_contracts/pdfs/SCHED_2011_ResDR_B_3_110727%28MJB%29v15_redacted.pdf and
- Saveonenergy website https://saveonenergy.ca/Consumer.aspx

Initiative Activities/Progress:

WNP is actively reviewing delivery models and technology. LDC staff attended OPA PeakSaver specific events as well as manufacture tradeshows. WNP is working as part of the CHEC Association to determine appropriate technologies and delivery agents. To date concern has existed with the in home device functionality and the negative impact it could have on customer relations.

In Market Date: Not in market for 2011

Lessons Learned:

- The schedule for Peaksaver Plus was posted in August 2011, but this did not provide adequate time for product procurement for 2011, and part of 2012. At the time of the product procurement process (2011), it was discovered the "In Home Display" units which communicate with installed smart meter technology were still in development and not ready for market deployment. Consequently, LDCs could not be in market with the Peaksaver Plus program until 2012.
- Introduction of new technology requires incentives for the development of such technology. Appropriate lead times for LDC analysis and assessment, product procurement, and testing and integration into the Smart Meter environment are also required. Making seemingly minor changes to provincial technical specifications can create significant issues when all LDCs attempt to implement the solution in their individual environments.
- Where a provincial solution is not available to all participants, attention to addressing specific LDC concerns is needed.
- In evaluating "In-Home Devices" in the market, it became apparent they were not customer-friendly in that many required the reprogramming every time there is a revision of rates. The interface between customer and device should be simplified to avoid customer questions and frustration with the "In-Home Device".

2.2.2 COMMERCIAL AND INSTITUTIONAL PROGRAM

2.2.2.1 EFFICIENCY: EQUIPMENT REPLACEMENT INCENTIVE (ERII) (Schedule C-2)

Target Customer Type(s): Commercial, Institutional, Agricultural and Industrial Customers

Initiative Frequency: Year round

Objective: The objective of this Initiative is to offer incentives to non-residential distribution customers to achieve reductions in electricity demand and consumption by upgrading to more energy efficient equipment for lighting, space cooling, ventilation and other measures.

Description: The Equipment Replacement Incentive Initiative (ERII) offers financial incentives to customers for the upgrade of existing equipment to energy efficient equipment. Upgrade projects can be classified into either: 1) prescriptive projects where prescribed measures replace associated required base case equipment; 2) engineered projects where energy and demand savings and incentives are calculated for associated measures; or 3) custom projects for other energy efficiency upgrades.

Targeted End Uses: Lighting, space cooling, ventilation and other measures

Delivery: LDC delivered.

Additional detail is available:

- Schedule C-2
 http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/current electricity contracts/pdfs/Schedule%20C-2%20ERII%20Initiative.pdf and
- Saveonenergy website https://saveonenergy.ca/Business/Program-Overviews/Retrofit-for-Commercial.aspx

Initiative Activities/Progress:

Direct customer contact, direct mail, general mail-outs and customer information sessions have been the used. Consumer understanding and uptake has been positive because the initiative was viewed as a refinement of the previously offered ERIP program.

- Direct Mail
- Walkthrough energy surveys
- Customer sessions

- Bill inserts
- Combined advertising with Commercial/Industrial programs.

In Market Date: March 06, 2011

Lessons Learned:

- ERII (previously Equipment Replacement Incentive Program ERIP) has been offered for many years. It is a high performing and cost-effective program.
- Customers appeared most interested in moving forward limited capital projects with a less than 2 year payback. Longer term projects have been difficult to get customer commitment.
- A major challenge for the ERII program in 2011 was payment delays. The centralized electronic processes were not ready as required by the Master Agreement. The lack of having these automated processes has caused considerable customer payment delays.
 Based on the lessons learned in the 2011 process, the centralized process review used for 2012 project payment has been streamlined.
- In March 2011, the new CRM system was launched by the OPA. This is the major online application system implemented to aid the 2011-2014 ERII application process. With system applications of this size and functionality, it was expected that there would be various issues identified at the time of the release, and on-going, to prove that the system was "ready for market." Unfortunately, the resolution of these issues, with the corresponding time lags and workarounds, has been perceived to be a barrier to some customer participation in the 2011 program year. In addition, there were also on-going issues and limitations with the back-end CRM system that affected LDCs ability to effectively review and approve applications.

2.2.2.2 DIRECT INSTALL INITIATIVE(DIL) (Schedule C-3)

Target Customer Type(s): Small Commercial, Institutional, Agricultural facilities and multi-family buildings

Initiative Frequency: Year round

Objective: The objective of this Initiative is to offer a free installation of eligible lighting and water heating measures of up to \$1,000 to eligible owners and tenants of commercial,

institutional, agricultural and multi-family facilities, for the purpose of achieving electricity and peak demand savings.

Description: The Direct Installed Lighting Initiative targets customers in the General Service <50kW account category. This Initiative offers turnkey lighting and electric hot water heater measures with a value up to \$1,000 at no cost to qualifying small businesses. In addition, standard prescriptive incentives are available for eligible equipment beyond the initial \$1,000 limit.

Target End Uses: Lighting and electric water heating measures

Delivery: Participants can enroll directly with the LDC, or would be contacted by the LDC/LDC-designated representative.

Additional detail is available:

- Schedule C-3
 http://www.powerauthority.on.ca/sites/default/files/page/Schedule%20C-3%20Direct%20Install%20Initiative%20-%20redacted.pdf and
- SaveONenergy website https://saveonenergy.ca/Business.aspx

Initiative Activities/Progress:

A contractor meeting was held to re-introduce and inform the delivery partners of the key aspects of the 2011 program. Follow up with qualifying customers were initiated to drive interest in the program and encourage registration for the install. It is recognized that saturation of this program will occur.

In Market Date: March 06, 2011

Lessons Learned:

- The Direct Installed Lighting Initiative is a continuation of the "Power Saving Blitz"
 Initiative offered by LDCs from 2008-2010. Successful execution of the previous
 rendition of this Initiative has resulted in diminished potential for the 2011-2014
 Initiative in some LDC territories.
- In smaller communities the success of the program relied largely on an actively engaged local contractor

- The inclusion of a standard incentive for additional measures increased project size and drove higher energy and demand savings results in some situations.
- The cost of materials has experienced price volatility, reducing the margins of the electrical contractors and has led to a reduction in vendor channel participation in some regions.
- Due to backlogs in the payment system, participant incentive payments from the OPA to the LDC were delayed.
- To address these issues, the LDCs have been working with the OPA through Change Management to address:
 - Extending the target Initiative population to include small agricultural customers;
 - Increasing the incentive envelope of \$1,000 to \$1,500 may ensure ongoing marketability of the program; and
 - o Reviewing the eligible measure price list to support contractor participation.

2.2.2.3 EXISTING BUILDING COMMISSIONING INCENTIVE INITIATIVE (Schedule C-6)

Target Customer Type(s): Commercial, Institutional, and Agricultural Customers

Initiative Frequency: Year round

Objective: The objective of this Initiative is to offer incentives for optimizing (but not replacing) existing chilled water systems for space cooling in non-residential facilities for the purpose of achieving implementation phase energy savings, implementation phase demand savings, or both.

Description: This Initiative offers Participants incentives for the following:

- scoping study phase
- investigation phase
- implementation phase
- hand off/completion phase

Targeted End Uses: Chilled water systems for space cooling

Delivery: LDC delivered.

Additional detail is available:

- Schedule C-6
 - http://www.powerauthority.on.ca/sites/default/files/new files/industry stakeholders/current electricity contracts/pdfs/Schedule%20C-
 - 6%20Commissioning%20Initiative.pdfand
- Saveonenergy website https://saveonenergy.ca/Business/Program-Overviews/Existing-Building-Commissioning.aspx

Initiative Activities/Progress:

General promotion of this initiative along with similar programs was utilized. The opportunity for chilled water systems is limited in WNP's service area

In Market Date: March 06, 2011

Lessons Learned:

- There was no customer uptake for this Initiative. It is suspected that the lack of
 participation in the program is a result of the Initiative being limited to space cooling.
 Accordingly chilled water systems used for other purposes should be made eligible and
 considered through Change Management.
- The customer expectation is that the program be expanded to include broader range of measures for a more holistic approach to building re-commissioning.

2.2.2.4 NEW CONSTRUCTION AND MAJOR RENOVATION INITIATIVE (HPNC) (Schedule C-4)

Target Customer Type(s): Commercial, Institutional, Agricultural and Industrial Customers

Initiative Frequency: Year round

Objective: The objective of this Initiative is to encourage builders of commercial, institutional, and industrial buildings (including multi-family buildings and agricultural facilities) to reduce electricity demand and/or consumption by designing and building new buildings with more energy-efficient equipment and systems for lighting, space cooling, ventilation and other Measures.

Description: The New Construction Initiative provides incentives for new buildings to exceed existing codes and standards for energy efficiency. The Initiative uses both a prescriptive and custom approach.

Targeted End Uses: Building modeling, lighting, space cooling, ventilation and other Measures

Delivery: LDC delivers to customers and design decision makers.

Additional detail is available:

- Schedule C-4
 http://www.powerauthority.on.ca/sites/default/files/page/ScheduleC-4
 4NewContructionInitiativeV2.pdf and
- Saveonenergy website https://saveonenergy.ca/Business/Program-Overviews/New-Construction.aspx

Initiative Activities/Progress:

This type of program is dependent upon the types of development and renovations being proposed in the service territory. The expectation is that we will be able to work with project proponents as those projects are identified.

In Market Date: March 06, 2011

Lessons Learned:

- This is a continuation of the High Performance New Construction program previously delivered by Enbridge Gas under contract with the OPA (and subcontracted to Union Gas), which ran until December 2010.
- For 2011, new industry participation was limited due to the delays in redesign of certain aspects of the Initiative such as:
 - 2011 prescriptive incentives needed to be aligned with ERII incentives
 - In the cases of delivering large projects (i.e. custom applications), 2011
 participation was limited due to 1) building code changes and 2) level of
 documentation required.

2.2.2.5 ENERGY AUDIT INITIATIVE (Schedule C-1)

Target Customer Type(s): Commercial, Institutional, Agricultural and Industrial Customers

Initiative Frequency: Year round

Objective: The objective of this Initiative is to offer incentives to owners and lessees of commercial, institutional, multi-family buildings and agricultural facilities for the purpose of

Wellington North Power Inc. 2011 CDM Annual Report: EB-2010-0215 September 30, 2012 Page 32 of 59

undertaking assessments to identify all possible opportunities to reduce electricity demand and consumption within their buildings or premises.

Description: This Initiative provides participants incentives for the completion of energy audits of electricity consuming equipment located in the facility. Energy audits include development of energy baselines, use assessments and performance monitoring and reporting.

Targeted End Uses: Various

Delivery: LDC delivered.

Additional detail is available:

Schedule C-1

http://www.powerauthority.on.ca/sites/default/files/new files/industry stakeholders/current_electricity_contracts/pdfs/Schedule%20C-

1%20Energy%20Audit%20Initiative.pdf and

Saveonenergy website https://saveonenergy.ca/Business/Program-Overviews/Audit-Funding.aspx

Initiative Activities/Progress:

The audit program was promoted in sight visits and customer information sessions. To date no applications have been received however it is realized that the planning window may take some time for the customer to implement.

In Market Date: March 06, 2011

Lessons Learned:

- Customer uptake in the beginning of 2011 was slow because of the "sensitive global economic conditions" resulting in limited capital funding available.
- Customers expect a greater connection with other CDM Initiatives as a result of completing the Energy Audit. The Initiative should be reviewed under Change Management for the means to readily incent Participants with Audits in hand to implement other electricity savings Initiatives.
- Customers appeared reluctant to do a full audit even after a walkthrough assessment indicated potential which could be further quantified in a full audit.

2.2.3 INDUSTRIAL PROGRAM

2.2.3.1 PROCESS& SYSTEMS UPGRADES INITIATIVE (PSUI) (Schedule D-1)

Target Customer Type(s): Industrial, Commercial, Institutional and Agricultural Customers

Initiative Frequency: Year round

Objectives: The objectives of this Initiative are to:

- Offer customers capital incentives and enabling Initiatives to assist with the implementation of large projects and project portfolios;
- Implement system optimization project in systems which are intrinsically complex and capital intensive; and
- Increase the capability of customers to implement energy management and system optimization projects.

Description: PSUI is an energy management Initiative that includes three Initiatives: (preliminary engineering study, detailed engineering study, and project incentive Initiative). The incentives are available to large distribution connected customers with projects or portfolio projects that are expected to generate at least 350 MWh of annualized electricity savings or, in the case of Micro-Projects, 100 MWh of annualized electricity savings. The capital incentive for this Initiative is the lowest of:

- a) \$200/MWh of annualized electricity savings
- b) 70% of projects cost
- c) A one year payback

Targeted End Uses: Process and systems

Delivery: LDC delivered with Key Account Management support, in some cases.

Additional detail is available:

Schedule D-1
 http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/
 current_electricity_contracts/pdfs/Schedule%20D

<u>1%20Process%20and%20Systems%20Upgrades%20Initiative.pdf</u> and

• Saveonenergy website https://saveonenergy.ca/Business.aspx

Initiative Activities/Progress:

WNP's industrial customers were not prepared to participate in the industrial programs during 2011, due to the current economic climate. These customers have shown interest in future projects which will allow them time for budgeting.

In Market Date: March 06, 2011

Lessons Learned:

- The PSUI program targets large customers that are undertaking large capital projects. There is typically a long sales cycle for these projects, and then a long project development cycle. As such, results did not appear in 2011. Limited results are expected to appear in 2012. The majority of the results are expected in 2013-2014, with a much reduced benefit to cumulative energy savings targets.
- The OPA retained Technical Reviewer, an integral component of this Initiative, was not in place until late Q4 2011, thereby limited 2011 program uptake.
- Steps are being taken in the 2012 change management process to simplify and streamline the micro-project application process and to allow smaller projects to be directed to the ERII stream.
- Given the size of the projects involved, the contract required for PSUI is a lengthy and complicated document. Attempts are being made through change management in 2012 to simplify the document while still protecting the ratepayer.
- In smaller service areas limited customer base to take advantage of program.

2.2.3.2 MONITORING & TARGETING INITIATIVE (Schedule D-2)

Target Customer Type(s): Industrial, Commercial, Institutional and Agricultural Customers

Initiative Frequency: Year round

Objective: This Initiative offers access to funding for the installation of Monitoring and Targeting systems in order to deliver a minimum savings target at the end of 24 months, and sustained for the term of the M&T Agreement.

Description: This Initiative offers customers funding for the installation of a Monitoring and Targeting system to help them understand how their energy consumption might be reduced. A facility energy manager, who regularly oversees energy usage, will now be able to use historical energy consumption performance to analyze and set targets.

Targeted End Uses: Process and systems

Delivery: LDC delivered with Key Account Management support, in some cases.

Additional detail is available:

Schedule D-2

http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/c urrent_electricity_contracts/pdfs/Schedule%20D-

2%20Monitoring%20and%20Targeting%20Initiative.pdf and

Saveonenergy website https://saveonenergy.ca/Business.aspx

Initiative Activities/Progress:

As a member of CHEC, WNP will share the resource of a Roving Energy Manager, which has been approved by the OPA. This will REM will assist WNP in the engagement of the industrial and commercial customers for this initiative.

In Market Date: March 06, 2011

Lessons Learned:

 The M&T Initiative was originally targeted at larger customers with the capacity to review the M&T data. This review requires the customer facility to employ an Energy Manager, or a person with equivalent qualifications, which has been a barrier for some customers. Through the change management process in 2012, changes are being made to both the M&T schedule and ERII to allow smaller facilities to employ M&T systems.

2.2.3.3 ENERGY MANAGER INITIATIVE (Schedule D-3)

Target Customer Type(s): Industrial, Commercial, Institutional and Agricultural Customers

Initiative Frequency: Year round

Objective: The objective of this Initiative is to provide customers and LDCs the opportunity to access funding for the engagement of energy managers in order to deliver a minimum annual savings target.

Description: This Initiative provides customers the opportunity to access funding to engage an on-site, full time embedded energy manager, or an off-site roving energy manager who is engaged by the LDC. The role of the energy manager is to take control of the facility's energy use by monitoring performance, leading awareness programs, and identifying opportunities for energy consumption improvement, and spearheading projects. Participants are funded 80% of the embedded energy manager's salary up to \$100,000 plus 80% of the energy manager's actual reasonable expenses incurred up to \$8,000 per year. Each embedded energy manager has a target of 300 kW/year of energy savings from one or more facilities. LDCs receive funding of up to \$120,000 for a Roving Energy Manager plus \$8,000 for expenses.

Targeted End Uses: Process and systems

Delivery: LDC delivered with Key Account Management support, in some cases.

Additional detail is available:

Schedule D-3
 http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/current_e
 lectricity_contracts/pdfs/Schedule%20D-3%20Energy%20Manager%20Initiative%202011-2014.pdf and

• Saveonenergy website https://saveonenergy.ca/Business.aspx

Initiative Activities/Progress:

As part of the CHEC Association an application for a Roving Energy Manager (REM) was made to the OPA on June 6th 2011 approval of the application was postponed until December 1, 2011. The OPA indicated the delay was because CHEC did not meet the threshold of share of provincial

Wellington North Power Inc. 2011 CDM Annual Report: EB-2010-0215 September 30, 2012

Page 37 of 59

targets. December 1, 2011 - CHEC's REM application was further reviewed and due to the amount of allocated total provincial targets within the CHEC member LDC's, the application was

then (unofficially) approved by the OPA.

Official approval was received from the OPA to proceed with the Roving Energy Manager

initiative January 23, 2012.

In Market Date: Not in Market in 2011

Lessons Learned:

At the beginning, it took longer than expected to set up the energy manager application

process.

Concern exists with the need to hire an individual vs. a company to meet the Roving

Energy Manager position. The outcome of the REM will be based on the skills of one

individual vs. the resources of a company with varied resources and support.

Concern exists with opportunity to hire a capable Roving Energy Managers (REM).

CHEC Association made application for REM to qualify and determine sufficient projects

to support the REM position.

2.2.3.4 KEY ACCOUNT MANAGER (KAM) (Schedule D-4)

Target Customer Type(s): Industrial, Commercial, Institutional and Agricultural Customers

Initiative Frequency: Year round

Objective: This Initiative offers LDCs the opportunity to access funding for the employment of a KAM in order to support them in fulfilling their obligations related to the PSUI. The KAM is considered to be a key element in assisting the consumer in overcoming traditional barriers related to energy management and help them achieve savings since the KAM can build

relationships and become a significant resource of knowledge to the customer.

Description: LDC delivered

Targeted End Uses: Process and systems

Delivery:

Additional detail is available:

ScheduleD-4

http://www.powerauthority.on.ca/sites/default/files/new files/industry stakeholders/current e lectricity_contracts/pdfs/Schedule%20D-3%20Energy%20Manager%20Initiative%202011-2014.pdf

Initiative Activities/Progress:

Do not qualify for a Key Account Manager placing additional pressure on other programs.

In Market Date: Not In Market

Lessons Learned:

Larger accounts not contained within service territory.

2.2.3.5 DEMAND RESPONSE 3 (Schedule D-6)

Target Customer Type(s): Industrial, Commercial, Institutional and Agricultural Customers

Initiative Frequency: Year round

Objective: This Initiative provides for Demand Response (DR) payments to contracted participants to compensate them for reducing their electricity consumption by a pre-defined amount during a demand response event.

Description: Demand Response 3 (DR3) is a demand response Initiative for commercial and industrial customers, of 50 kW or greater, to reduce the amount of power being used during certain periods of the year. The DR3 Initiative is a contractual resource that is an economic alternative to procurement of new generation capacity. DR3 comes with specific contractual obligations requiring participants to reduce their use of electricity relative to a baseline when called upon. This Initiative makes payments for participants to be on standby and payments for the actual electricity reduction provided during a demand response event. Participants are scheduled to be on standby approximately 1,600 hours per calendar year for possible dispatch of up to 100 hours or 200 hours within that year depending on the contract.

Targeted End Uses: Commercial and Industrial Operations

Delivery: DR3 is delivered by Demand Response Providers (DRPs), under contract to the OPA. The OPA administers contracts with all DRPs and Direct Participants (who provide in excess of 5 MW of demand response capacity). OPA provides administration including settlement,

measurement and verification, and dispatch. LDCs are responsible for local customer outreach and marketing efforts.

Additional detail is available:

- Schedule D-6
 http://www.powerauthority.on.ca/sites/default/files/new_files/industry_stakeholders/current_e
 lectricity_contracts/pdfs/Schedule%20D-6%20Demand%20Response%203%202011-2014.pdf
 and
- Saveonenergy website https://saveonenergy.ca/Business.aspx

Initiative Activities/Progress:

Marketing has been limited. DR3 noted with other industrial program in conservation literature and websites. Evaluation and discussion with aggregators were held, however no exclusive arrangements have been entered into by WNP to support any one aggregator at this time.

In Market Date: March 06, 2011

Lessons Learned:

- Customer data is not provided by the OPA on an individual customer basis due to
 contractual requirements with the aggregators. This limits LDCs' ability to
 effectively market to prospective participants. LDCs are now approaching the
 Aggregators individually and working to develop agreements in order to identify
 potential customers of this Initiative.
- Lack of information sharing removes the ability of the LDC to ensure that the customer is satisfied with the services provided by the aggregator. This could impact on ability to maintain in the program until December 2014.

2.2.4 LOW INCOME INITIATIVE (HOME ASSISTANCE PROGRAM) (Schedule E)

Target Customer Type(s): Income Qualified Residential Customers

Initiative Frequency: Year round

Objective: The objective of this Initiative is to offer free installation of energy efficiency measures to income qualified households for the purpose of achieving electricity and peak demand savings.

Wellington North Power Inc. 2011 CDM Annual Report: EB-2010-0215 September 30, 2012

Page 40 of 59

Description: This is a turnkey Initiative for income qualified customers. It offers residents the opportunity to take advantage of free installation of energy efficient measures that improve the comfort of their home, increase efficiency, and help them save money. All eligible customers receive a Basic and Extended Measures Audit, while customers with electric heat also receive a Weatherization

Audit. The Initiative is designed to coordinate efforts with gas utilities.

Targeted End Uses: End use measures based on results of audit (i.e. compact fluorescent light

bulbs)

Delivery: LDC delivered.

Additional detail is available:

Schedule E

http://www.powerauthority.on.ca/sites/default/files/page/Low%20Income%20Schedul

e%20-%20redacted%20version.pdf

Initiative Activities/Progress:

Procurement process of this initiative was undertaken in late 2011. The contractor and infrastructure prepared for delivery in early 2012.

In Market Date:

Not in market in 2011.

Lessons Learned:

• This Initiative Schedule was finalized late in (May 2011) however the program was not ready implementation, until 2012. Therefore, WNP was not able to be in market for

2011.

• The manner in which the Program Administrative Budget (PAB) was assigned resulted in

WNP having a lower PAB to fund the program. The impact will reduce WNP ability to

effectively market this program.

The financial scope, complexity, and customer privacy requirements of this Initiative

resulted in a lengthy procurement process of a delivery agent.

Most residential customers were extremely uncomfortable sharing their annual income

with the local LDC.

2.2.5 PRE-2011 PROGRAMS COMPLETED IN 2011

2.2.5.1 ELECTRICITY RETROFIT INCENTIVE PROGRAM

Target Customer Type(s): Commercial, Institutional, and Agricultural Customers

Initiative Frequency: Year round

Objective:

Description: Refer to section 2.2.2.1

Targeted End Uses:

Delivery: N/A

Initiative Activities/Progress: Initiative Activities/Progress:

This is the recognition of work undertaken in the ERIP program that had been completed in 2011. Work in this area was to continue to encourage and assist applicants with the completion of previously approved projects.

In Market Date: 2010

Lessons Learned:

- The lack of contractor engagement with customers to initiate and complete projects approved in 2010 never materialized.
- The 2010 projects created additional work in the early stages of 2011 to finalize the projects and ensure proper follow up and payment. Customers had some concerns with the delay with incentive payments.

2.2.5.2 HIGH PERFORMANCE NEW CONSTRUCTION

Target Customer Type(s): Commercial, Institutional, and Agricultural Customers

Initiative Frequency: Year round

Wellington North Power Inc. 2011 CDM Annual Report: EB-2010-0215 September 30, 2012 Page 42 of 59

Objective:

Description: Refer to section 2.2.2.4

Targeted End Uses:

Delivery: N/A

Initiative Activities/Progress: Carry forward

In Market Date: 2010

Lesson Learned:

2.2.5.3 MULTIFAMILY ENERGY EFFICIENCY REBATES

Target Customer Type(s):

Initiative Frequency: Year round

Objective:

Description: OPA's Multifamily Energy Efficiency Rebates (MEER) Initiative applies to multifamily buildings of six units or more, including rental buildings, condominiums, and assisted social housing. The OPA contracted with GreenSaver to deliver the MEER Initiative outside of the Toronto Hydro service territory. Activities delivered in Toronto were contracted with the City.

Similar to ERII and ERIP, MEER provides financial incentives for prescriptive and custom measures, but also funds resident education. Unlike ERII, where incentives are paid by the LDC, all incentives through MEER are paid through the contracted partner (i.e. GreenSaver).

Targeted End Uses:

Delivery: N/A

Initiative Activities/Progress: Not in progress

In Market Date: No outstanding projects carried forward.

Lesson Learned: N/A

2.4 Program Administrative Budget (PAB) Spending

This section notes the spending on the OPA – Contracted Province – Wide CDM Programs. As noted in the Master Agreement there are four OPA Contracted Province Wide CDM Programs namely:

- 1. Residential Program
- 2. Commercial & Institutional Program
- 3. Industrial Program
- 4. Home Assistance Program.

In addition to the OPA contracted Province – Wide CDM Programs some portions of the pre-2011 funding has been included in the table below.

Table 2: Spending

Initiative	Program Administration Budget (PAB)	Participant Based Funding (PBF)	Participant Incentives (PI)	Capability Building Funding (CBF)	TOTAL
Consumer Program	\$12,857.60	0	0	0	\$12,857.60
Business Program	\$15,500.20	\$7,650	\$27,926	\$0	\$51,076.20
Industrial Program	\$9,347.85	\$0	\$0	\$0	\$9,347.85
Home Assistance Program	\$0	\$0	\$0	\$0	\$0
Pre 2011 Programs Completed in 2011	\$0	\$0	\$0	\$0	\$ 0
TOTAL Province-wide CDM PROGRAMS	\$37,705.65	\$7,650	\$27,926	\$0	\$73,281.65

2.5 EVALUATION FINDINGS

The following tables represent the OPA Key findings with regards to the Province – Wide – Programs.

Table 3: Evaluation Findings:

	Table 3: OPA Province-Wide Evaluation Findings								
#	Initiative		OPA Province-Wide Key Evaluation Findings						
Cons	sumer Program								
		*	Overall participation continues to decline year over year * Participation declined 17% from 2010 (from over 67,000 units in 2010 to over						
			56,000 units in 2011)						
		*	97% of net resource savings achieved through the home pick-up stream						
	Annlinner		 Measure Breakdown: 66% refrigerators, 30% freezers, 4% Dehumidifiers and window air conditioners 						
1	Appliance Retirement	*	3% of net resource savings achieved through the Retailer pick-up stream						
	Kethement		* Measure Breakdown: 90% refrigerators, 10% freezers						
		*	Net-to-Gross ratio for the initiative was 50%						
			 Measure-level free ridership ranges from 82% for the retailer pick-up stream to 49% for the home pick-up stream 						
			 Measure-level spillover ranges from 3.7% for the retailer pick-up stream to 1.7% for the home pick-up stream 						
		*	Overall eligible units exchanged declined by 36% from 2010 (from over 5,700 units in						
			* Measure Breakdown: 75% window air conditioners, 25% dehumidifiers						
		*	Dehumidifiers and window air conditioners contributed almost equally to the net						
2	Appliance		Dehumidifiers provide more than three times the energy savings per unit than window air conditioners						
	Exchange	*	Window air conditioners contributed to 64% of the net peak demand savings achieved						
		*	Approximately 96% of consumers reported having replaced their exchanged units (as opposed to retiring the unit)						
		*	Net-to-Gross ratio for the initiative is consistent with previous evaluations (51.5%)						

		١.					
		*	Total air conditioner and furnace installations increased by 14% (from over 95,800 units in 2010 to over 111,500 units in 2011)				
			·				
			* Measure Breakdown: 64% furnaces, 10% tier 1 air conditioners (SEER 14.5) and 26% tier 2 air conditioners (SEER 15)				
			* Measure breakdown did not change from 2010 to 2011				
		*	The HVAC Incentives initiative continues to deliver the majority of both the energy				
3	HVAC Incentives		(45%) and demand (83%) savings in the consumer program				
			* Furnaces accounted for over 91% of energy savings achieved for this initiative				
		*	Net-to-Gross ratio for the initiative was 17% higher than 2010 (from 43% in 2010 to				
			* Increase due in part to the removal of programmable thermostats from the				
			program, and an increase in the net-to-gross ratio for both Furnaces and Tier 2				
			air conditioners (SEER 15)				
		*	Customers redeemed nearly 210,000 coupons, translating to nearly 560,000 products				
			 Majority of coupons redeemed were downloadable (~40%) or LDC-branded (~35%) 				
4	Conservation Instant Coupon		 Majority of coupons redeemed were for multi-packs of standard spiral CFLs (37%), followed by multi-packs of specialty CFLs (17%) 				
	Booklet	*	Per unit savings estimates and net-to-gross ratios for 2011 are based on a weighted				
			average of 2009 and 2010 evaluation findings				
		*	Careful attention in the 2012 evaluation will be made for standard CFLs since it is				
			believed that the market has largely been transformed				
		*	Customers redeemed nearly 370,000 coupons, translating to over 870,000 products				
			* Majority of coupons redeemed were for multi-packs of standard spiral CFLs				
			(49%), followed by multi-packs of specialty CFLs (16%)				
		*	Per unit savings estimates and net-to-gross ratios for 2011 are based on a weighted average of 2009 and 2010 evaluation findings				
	Bi-Annual		* Standard CFLs and heavy duty outdoor timers were reintroduced to the				
5	Retailer Event		initiative in 2011 and contributed more than 64% of the initiative's 2011 net				
			annual energy savings				
			* While the volume of coupons redeemed for heavy duty outdoor timers was				
			relatively small (less than 1%), the measure accounted for 10% of net annual				
			savings due to high per unit savings				
		*	Careful attention in the 2012 evaluation will be made for standard CFLs since it is believed that the market has largely been transformed.				
		*	Initiative was not evaluated in 2011 due to low uptake. Verified Bi-Annual Retailer				
6	Retailer Co-op		Event per unit assumptions and free-ridership rates were used to calculate net				
			resource savings				
		*	Approximately 20,000 new devices were installed in 2011				
	Residential		* 99% of the new devices enrolled controlled residential central AC (CAC)				
7	Demand	*	2011 only saw 1 atypical event (in both weather and timing) that had limited				
	Response		* The ex ante impact developed through the 2009/2010 evaluations was				
			maintained for 2011; residential CAC: 0.56 kW/device, commercial CAC: 0.64				
			kW/device, and Electric Water Heaters: 0.30 kW/device				
8	Residential New	*	Initiative was not evaluated in 2011 due to limited uptake				
0	Construction	*	Business case assumptions were used to calculate savings				

Busi	ness Program						
		*	Gross verified energy savings were boosted by lighting projects in the prescriptive				
		*	Lighting projects overall were determined to have a realization rate of 112%; 116% when including interactive energy changes				
			* On average, the evaluation found high realization rates as a result of both longer operating hours and larger wattage reductions than initial assumptions				
			 Low realization rates for engineered lighting projects due to overstated operating hour assumptions 				
9	Efficiency: Equipment Replacement	*	Custom non-lighting projects suffered from process issues such as: the absence of required M&V plans, the use of inappropriate assumptions, and the lack of adherence to the M&V plan				
		*	The final realization rate for summer peak demand was 94%				
			 84% was a result of different methodologies used to calculate peak demand savings 				
			* 10% due to the benefits from reduced air conditioning load in lighting retrofits				
		*	Overall net-to-gross ratios in the low 70's represent an improvement over the 2009				
			Strict eligibility requirements and improvements in the pre-approval process contributed to the improvement in net-to-gross ratios				
		*	Though overall performance is above expectations, participation continues to decline year over year as the initiative reaches maturity				
		*	70% of province-wide resource savings persist to 2014				
			* Over 35% of the projects for 2011 included at least one CFL measure				
			 Resource savings from CFLs in the commercial sector only persist for the industry standard of 3 years 				
10	Direct Install	*	Since 2009 the overall realization rate for this program has improved				
	Lighting		* 2011 evaluation recorded the highest energy realization rate to date at 89.5%				
			* The hours of use values were held constant from the 2010 evaluation and continue to be the main driver of energy realization rate				
			Lights installed in "as needed" areas (e.g., bathrooms, storage areas) were determined to have very low realization rates due to the difference in actual energy saved vs. reported savings				
	Existing Building						
11	Commissioning	*	Initiative was not evaluated in 2011, no completed projects in 2011				
	Incentive New	*	latitation was not evaluated in 2011 due to law water.				
	Construction and		Initiative was not evaluated in 2011 due to low uptake				
12	Major		Assumptions used are consistent with preliminary reporting based on the 2010				
	Renovation		Evaluation findings and consultation with the C&I Work Group (100% realization				
	Incentive	*	rate and 50% net-to-gross ratio)				

13	Energy Audit	*	The evaluation is ongoing. The sample size for 2011 was too small to draw reliable conclusions.
14	Commercial Demand Response (part of the Residential program schedule)	*	See residential demand response (#7)
15	Demand Response 3 (part of the Industrial program schedule)	*	See Demand Response 3 (#20)

Indu	strial Program		
16	Process & System Upgrades	*	Initiative was not evaluated in 2011, no completed projects in 2011
17	Monitoring & Targeting	*	Initiative was not evaluated in 2011, no completed projects in 2011
18	Energy Manager	*	Initiative was not evaluated in 2011, no completed projects in 2011
19	Efficiency: Equipment Replacement Incentive (part of the C&I program schedule)	*	See Efficiency: Equipment Replacement (#9)
		*	Program performance for Tier 1 customers increased with DR-3 participants
			 Industrial customers outperform commercial customers by provide 84% and 76% of contracted MW, respectively
20	Demand	*	Program continues to diversify but still remains heavily concentrated with less
	Response 3	*	By increasing the number of contributors in each settlement account and implementation of the new baseline methodology the performance of the program is expected to increase

Hon	Home Assistance Program						
21	Home Assistance	*	Initiative was not evaluated in 2011 due to low uptake				
21	Program	*	Business Case assumptions were used to calculate savings				
Pre-	2011 Programs cor	nple	ted in 2011				
	Electricity.	*	Initiative was not evaluated				
22	Electricity Retrofit Incentive Program	*	Net-to-Gross ratios used are consistent with the 2010 evaluation findings (multifamily buildings 99% realization rate and 62% net-to-gross ratio and C&I buildings 77% realization rate and 52% net-to-gross ratio)				
	High	*	Initiative was not evaluated				
23	Performance New Construction	*	Net-to-Gross ratios used are consistent with the 2010 evaluation findings (realization rate of 100% and net-to-gross ratio of 50%)				
	Toronto	*	Initiative was not evaluated				
24	Comprehensive	*	Net-to-Gross ratios used are consistent with the 2010 evaluation findings				
25	Multifamily	*	Initiative was not evaluated				
25	Energy Efficiency Rebates	*	Net-to-Gross ratios used are consistent with the 2010 evaluation findings				
26	Data Centre Incentive Program	*	Initiative was not evaluated				
27	EnWin Green Suites	*	Initiative was not evaluated				

2.5.1 EVALUATION RESULTS

The table below represents WNP's allocated Provincial energy savings for 2011:

Table 4: Evaluation Results:

		Realization Rate		Gross S	oss Savings Net-to-Gro		oss Ratio	ss Ratio Net Savings		Contribution to Targets	
#	Initiative	Peak Demand Savings	Energy Savings	Incremental Peak Demand Savings (kW)	Incremental Energy Savings (kWh)	Peak Demand Savings	Energy Savings	Incremental Peak Demand Savings (kW)	Incremental Energy Savings (kWh)	Program-to-Date: Net Annual Peak Demand Savings (kW) in 2014	Program-to-Date: 2011- 2014 Net Cumulative Energy Savings (kWh)

2.6 Additional Comments

The transition from 2010 to 2011 programming was not seamless and impacted on the delivery of the programs throughout 2011. The transition and difficulty with the support systems also frustrated the delivery network, contractor partners and end use customers. In retrospect, when the sheer size of the initiative, the design and launch of 16 initiatives, is considered it is reasonable to expect some significant challenges and impact.

The time taken to finalize the schedules presented a delay in LDCs preparing to launch programs. The ability to confirm infrastructure to deliver the program required the details of the schedule to be finalized prior to moving forward with delivery contracts. Even once the schedules were released, the number of schedules and the details within each became a significant task for LDCs, even when working in conjunction with other LDCs, to review, seek clarification and fully understand the requirements of each initiative and how one may relate to another.

Once the schedules were finalized and made available to the LDCs central marketing of the programs commenced. This created issues as delivery systems and even information systems, which were not set up to support such central marketing. At the local level, early marketing was kept to a minimum pending the confirmation of the infrastructure to affect appropriate program delivery. The ability to focus on acquiring the infrastructure was complicated in part in trying to answer questions from customer who wished to participate in the programs. The need to both, gear up for the programs and operate programs became problematic. For many LCDs, PAB funding was not available until the end of 2011 or into 2012.

Adding to the issues associated with the program initiation was the launch of the CRM System. The one stop shop for customer to access applications and resources. However although supported, the launch of such a comprehensive system into the live market placed innumerable challenges in the field and undoubtedly with the OPA. In the early stages the system which was designed to save time was causing an increase in the amount of time to be spent on problem solving and dealing with frustrated clients. In many cases those frustrated clients were past participants and /or contractors who are key to meeting targets.

Wellington North Power Inc. 2011 CDM Annual Report: EB-2010-0215 September 30, 2012 Page 53 of 59

The additional work in managing these CRM issues impacted the ability of LDCs to focus on the infrastructure development and delivery of programs.

Over the first year the overall customer engagement for conservation within the distributor's service area has been difficult to determine. In areas where there had been interest in past programs, customers were hesitant to commit due to the current global economic downturn.

With the maturing of the support and delivery systems many of the issues faced in the first year have been resolved. This should allow for a more focused and organized approach moving forward.

3.0 Combined CDM Reporting Elements

3.1 Progress Towards CDM Targets

Table 6 and Table 7 outlines the progress made against WNP's MW target and GWh target as set out in WNP's licence (ED-2002-0511). The tables below represent the considerable challenges in terms of meeting the MW and GWh targets within WNP service area for 2011. However going forward WNP projects more customer engagement, coupled with increased interest in the CDM programs will ensure the required targets are reached.

4.0 CDM Strategy Modifications

Wellington North Power Inc. (WNP) filed its CDM Strategy (EB-2010-0215) with the OEB November 1st 2010. The strategy included the initial CDM targets as communicated to the Provinces electricity distribution companies. As a result of the issues encountered in 2011, WNP is submitting a revised CDM strategy which is provided below. The revised strategy includes the OEB targets, allocated under WNP's distribution licence. The CDM Strategy has also been revised to include the company's first year performance.

To illustrate the changes between the initial CDM Strategy from 2010 and the revised CDM Strategy for 2011-2014 both Strategies are represented in the tables below. The actual energy savings achieved for 2011 are included in the revised WNP CDM Strategy.

Indicators from 2011:

The 2011 Final OPA results, although they are lagging behind the initial forecasted CDM Strategy, the results are quite encouraging considering all the initiatives were not in the market for the entire year. Under the revised WNP projected CDM Strategy energy savings for 2011-2014 are approaching 104% of the target.

The CDM Strategy acknowledges, all savings cannot be achieved through Provincial Programs alone and anticipated contributions are necessary from OEB Approved Programs. The contribution of the OEB Approved Time of Use (TOU) Program will be included in future revisions of the distributors CDM Strategy. WNP requires data from the OPA for the TOU energy savings in 2011 to assist with forecasting for 2012-2014. The OEB TOU energy savings is critical to Provinces distribution companies in order to successfully meet the mandated targets.

Ability to Meet Target:

As stated previously in this report kW and kWh energy savings are expected to be achieved. The addition of OEB Approved Programs and/or modifications to the Provincial Programs to better meet customer interests and needs will assist in ensuring the targets are achieved.

To further assist in meeting targets, the 12 member CHEC Group has been successful in its application to the OPA for a Roving Energy Manager (REM). The process has taken longer than first planned, however the resource will join our LDC members in September 2012. The addition of the REM resource is expected to give the CHEC LDC's the ability to provide support to larger customers' to review their operations and processes and identify meaningful energy savings tailored to their businesses.

Wellington North Power Inc. 2011 CDM Annual Report: EB-2010-0215 September 30, 2012 Page 56 of 59

To achieve the aggressive targets for the reduction in Peak Demand, requires significant participation by the larger customers in kW savings. The REM and continued improvements to programs and program support will help to deliver the required savings.
